Seminar description

This introductory seminar provides the fundamental principles of diagnosis and management of acute craniomaxillofacial trauma, including midfacial and mandibular fractures, with an emphasis on treatment planning and complication management.

Learning objectives

By the end of the seminar, participants will be able to:

- Diagnose facial injuries using clinical assessment and imaging.
- Formulate appropriate operative and non-operative treatment plans.
- Apply basic principles of facial trauma management.
- Recognize and manage common complications

Venue

Dr V D Patil Hall (First floor)
KLE Centenary Convention Centre, Belgaum
